

12-WEEK LIVE PROGRAM

AI Product Management.

A hands-on, case-study-driven program where you learn to identify, design, evaluate and ship AI-powered products the way real AI teams practice it — then walk away with a portfolio-ready AI product case study.

UX

HOW IT WORKS

Built like a real AI product team — every single week.

This isn't a lecture series. Every week follows the same rhythm real AI product teams use: prepare, work the case, apply it to your own capstone product, get feedback.

PHASE 01 · WEEKS 1–4

Understand & Discover

Where every AI Product Manager has to start — what AI actually is, where it creates real value, and how to responsibly identify AI opportunities worth building.

PHASE 02 · WEEKS 5–8

Design & Build

Where it becomes real — LLMs, generative AI, AI-powered UX, and translating AI capability into shippable product requirements.

PHASE 03 · WEEKS 9–12

Evaluate, Launch & Grow

The skills teams actually pay for — responsible AI, MLOps, launch strategy, monetization, and leading AI products through ambiguity.

LIVE WEEKLY SESSIONS

3

MONTHS, START TO FINISH

Direct

ACCESS TO YOUR FACILITATOR

STEP 01

Pre-Read Sent

Reading material for the week is sent ahead of class, so you walk in already familiar with the topic.

STEP 02

Live Case Study

The live class works through a real-world AI product case study built around that week's topic — not just theory.

STEP 03

Build On Your Capstone

Every week you apply what you learned to your own AI product, building a portfolio-ready case study as the program progresses.

STEP 04

Direct Access

Mentorship access to your facilitator throughout the program — for questions between classes too.

A note on facilitation: Every cohort is led by an OIStride-trained facilitator, delivering the curriculum, case studies and standards set by our founder.

Understand & Discover

Where every AI Product Manager has to start — what AI actually is, where it creates real value, and how to responsibly identify AI opportunities worth building.

AIPM-01 · WEEK 1

AI Foundations for Product Managers

APPLICATION: AI PRODUCT TEARDOWN

- Artificial Intelligence, Machine Learning & Generative AI, explained at a PM level
- Where AI systems succeed, struggle & fail — hallucinations, bias & uncertainty
- The AI PM role: partnering with data scientists, ML & software engineers

AIPM-02 · WEEK 2

AI Product Discovery & Opportunity ID

APPLICATION: EVALUATE & RANK AI OPPORTUNITIES

- Spotting where AI creates real leverage — automation, prediction, generation, personalization
- Separating genuine customer problems from AI-shaped solutions looking for one
- Evaluating opportunities on value, feasibility, data availability & risk

AIPM-03 · WEEK 3

Data, Research & AI Product Foundations

APPLICATION: DATA REQUIREMENTS ASSESSMENT

- Structured vs unstructured data, and what makes training data usable
- Data collection, labeling, cleaning, privacy & bias
- Building a data strategy that creates a sustainable advantage

AIPM-04 · WEEK 4

AI Product Strategy & Vision

APPLICATION: BUILD AN AI PRODUCT STRATEGY

- Defining AI product vision: customer outcome, business outcome, AI's role in it
- Build vs buy vs partner, model selection & competitive differentiation
- AI business models: subscription, usage-based, API & enterprise pricing

Design & Build

Where it becomes real — LLMs, generative AI, AI-powered UX, and translating AI capability into shippable product requirements.

AIPM-05 · WEEK 5

Generative AI, LLMs & AI Applications

APPLICATION: DECONSTRUCT AN AI PRODUCT'S ARCHITECTURE

- How LLMs work: tokens, context windows, foundation models & their limits
- Prompting, embeddings, RAG, fine-tuning & tool/function calling
- AI agents vs chatbots — planning, memory & human-in-the-loop workflows

AIPM-06 · WEEK 6

AI Product Design & User Experience

APPLICATION: DESIGN AN AI-POWERED EXPERIENCE

- Designing for probabilistic outputs — confidence, error recovery & graceful failure
- AI UX patterns: copilots, chat, recommendations & agentic workflows
- Building trust through transparency, sourcing & human override

AIPM-07 · WEEK 7

AI Product Requirements & Development

APPLICATION: WRITE AN AI PRD

- Writing AI-specific requirements: accuracy, latency, cost & model behaviour
- AI user stories, acceptance criteria & failure scenarios
- The AI development lifecycle: data, model, integration, testing & monitoring

AIPM-08 · WEEK 8

AI Experimentation, Testing & Evaluation

APPLICATION: BUILD AN EVALUATION FRAMEWORK

- Designing AI experiments with real baselines & success criteria
- Model evaluation: accuracy, precision, recall & benchmarking
- Evaluating generative AI: relevance, groundedness, safety & consistency

THE CURRICULUM

Evaluate, Launch & Grow

The skills teams actually pay for — responsible AI, MLOps, launch strategy, monetization, and leading AI products through ambiguity.

AIPM-09 · WEEK 9

Responsible AI, Risk & Governance

APPLICATION: CONDUCT AN AI RISK ASSESSMENT

- Responsible AI principles: fairness, transparency & accountability
- Identifying AI risk: bias, hallucination, prompt injection & over-reliance
- Governance, guardrails & incident management for AI products

AIPM-10 · WEEK 10

MLOps, Deployment & AI Product Ops

APPLICATION: BUILD AN OPERATIONAL PLAN

- What MLOps means for a PM: model lifecycle, deployment & serving
- Monitoring for data drift, model drift, latency & reliability
- Managing inference costs & the economics of scaling an AI product

AIPM-11 · WEEK 11

AI Launch, Growth & Commercialization

APPLICATION: BUILD A GTM & PRICING STRATEGY

- Launch readiness, beta & pilot programs, and customer education
- Positioning & communicating AI value to technical and non-technical buyers
- AI monetization: usage-based, token-based, seat-based & outcome-based pricing

AIPM-12 · WEEK 12

AI Product Leadership & Capstone

APPLICATION: PRESENT THE COMPLETE AI PRODUCT

- Leading AI teams through ambiguity & incomplete information
- Trade-offs: build vs buy, automation vs oversight, speed vs quality
- Presenting a portfolio-ready, end-to-end AI Product Management case study

WHO THIS IS FOR

Built for people who need AI product skills to actually work.

No prior AI or data science experience required — the program starts from AI fundamentals and builds up to advanced, tool-based AI product practice.

Product Managers Moving Into AI

Add AI fluency to existing PM experience and lead AI-powered roadmaps with confidence.

Aspiring AI Product Managers

Break into AI Product Management with the frameworks and vocabulary the role actually demands.

Data Scientists & ML Engineers

Move from building models to owning the product decisions built around them.

Founders Building AI Products

Learn to scope, evaluate and ship AI features without over-promising what the model can do.

Business & Technical Leads

Work better with AI and data teams by understanding what's genuinely possible — and what isn't.

Anyone Ready To Commit

Weekly live classes over three months — built for someone serious about finishing what they start.

YOU'LL WALK AWAY WITH

- ✓ A working grasp of AI, ML & Generative AI at a Product Management level
- ✓ A complete, portfolio-ready AI product case study — from opportunity to GTM
- ✓ The ability to scope, evaluate & ship AI-powered product features
- ✓ A working AI evaluation & responsible AI risk framework you built yourself

FORMAT AT A GLANCE

- ✓ 12 live classes, 2 hours each, once a week, over 3 months
- ✓ Pre-reads before every class, case study during
- ✓ A live capstone AI product built progressively across the program
- ✓ Direct mentorship access to your facilitator throughout

Obomhense Idemudia
"JED" · FOUNDER, OISTRIDE ACADEMY

ABOUT THE FOUNDER

Learn AI Product Management from someone building it, not just teaching it.

Jed is a Senior Product Manager and AI-augmented product leader whose work spans fintech, healthcare and travel-tech — owning real product decisions, sprint execution and cross-functional delivery, not just training slides. He has trained and mentored professionals across Nigeria, Canada, the UK, the USA and West Africa, and has spent recent years building hands-on fluency in how AI systems are actually scoped, evaluated and shipped as products, not just experimented with in a notebook.

Cross-Industry Practice

Real Senior PM experience spanning fintech, healthcare and travel-tech — not a single-domain background.

AI-Augmented Practitioner

Works daily with LLMs, evaluation tooling and AI workflows — not just AI product theory.

Trainer & Coach

Years of experience facilitating Product, Agile and AI Product Management training across multiple continents.

GOOD TO KNOW

What's included, and what's optional.

CORE PROGRAM

Everything Inside the 12 Weeks

Fully included in your program, no extra cost:

- ✓ All 12 live weekly classes, case-study led
- ✓ Pre-read materials before every session
- ✓ A live AI capstone product, built and refined week by week
- ✓ Live Q&A after every class
- ✓ Direct mentorship access throughout

OPTIONAL ADD-ON

LinkedIn & CV Optimization

Not automatically included — available if you want it, discussed separately:

- ✓ Learn how to optimize your own LinkedIn profile
- ✓ Learn how to structure and tailor your own CV
- ✓ Coaching on the process, not a done-for-you service
- ✓ Scope & terms agreed directly with your facilitator
